

## Operations Manager anytime, anywhere

### Features

- ▶ See OpsMgr states, alerts and performance graphs directly on the smartphone or tablet
- ▶ Reduce system downtime and save on recovery costs
- ▶ Define or filter the specific OpsMgr monitored objects you need to see on your smartphone or tablet
- ▶ Perform actions like running tasks or closing alerts directly from the device of your choice
- ▶ Easy to send email alerts and performance graphs
- ▶ Execute any task in Operations Manager from your smartphone or tablet

Xian Wings is the best smartphone and tablet application in the market to access your Microsoft System Center Operations Manager 2007 and 2012 environment

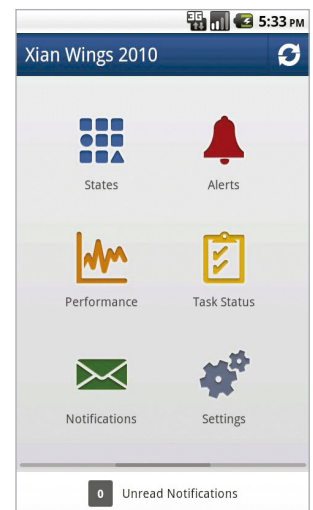

Wouldn't it be great to have a client application that allows you to directly access your Operations Manager environment? What about taking it with you wherever you go on your smart phone or tablet? Let us introduce you to Xian Wings, the top notch application for system administrators.

### Summary

The summary view, as part of a new and improved usability, displays a complete overview of all Xian Wings' main features. You can browse everywhere from States and Alerts to Performance graphs, task status, and more!

### States

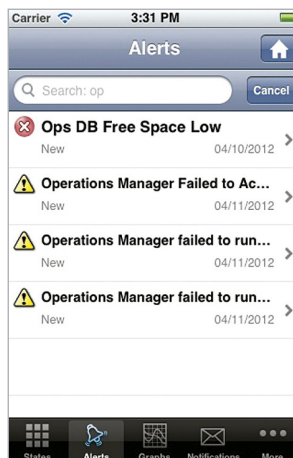

Just like in Operations Manager, you have the option to see the states of all the objects that you have defined and take actions if you see a problem.

### Alerts

As in Operations Manager, you can check the alerts of a specific object or see all the alerts currently active. With an easy to set up filter you can limit the number of alerts forwarded to your mobile devices as to enhance usability. In addition you can change alert properties in real time, each alert count also has its own KB just as you'd see in the Operations Manager console.

In addition, when you received an alert in the past, you could just assign it to another Wings user; now, you can also send a brief and concise report through mail to anyone you want to take actions!

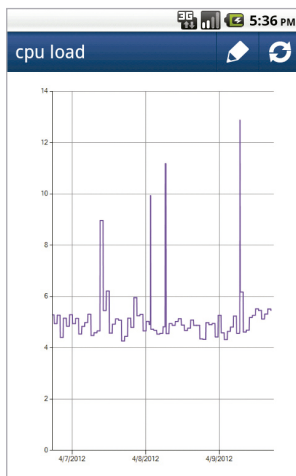

## Tasks

Imagine you need an extra bit of information, like the memory usage of a process, ip configurations, etc. Like in Operations Manager Xian Wings gives you the option to also run such tasks from your device and show you the output or results.

## Notifications

To be able to receive the most important events as they occur, Xian Wings gives you the option to set subscriptions. This means you will be immediately notified on the events of the objects you have previously defined. Once you have found the root cause of the problem, Xian Wings gives you the option to execute tasks, directly from the State View or the Alerts View.

## Performance graphs

Xian Wings allows you to see the state of your devices in a graphical way, just by selecting the objects and counters you want to view. Performance graphs help you to understand the possible causes of the problem.

As a unique feature, Wings allows you to combine different kinds of counters in one single performance graph. Same as with the alerts, Xian Wings allows you to send any performance graph you generated through email.

Xian Wings has been natively developed for each platform and it is currently available for: Windows Phone, iPhone, iPad and Android mobile devices.

## Wings HD

If you have an iPad or Android tablet, Wings HD is your best option. This version offers all the features from former versions only adjusted to fit your tablet's screen. You have the ability to create your own dashboards with graphs, states and alerts. A simple click on any object will open an object related screen that gives you the ability to see the root cause of the problem and take actions. In addition, both platforms (iPad and Android) are compatible ensuring that your Wings HD working space remains the same.

Wings HD is by far the best mobile dashboard out there!

## Natively Supported platforms:

- ▶ Windows Phone
- ▶ Android devices
- ▶ iPhone and iPad
