

JALASOFT XIAN NM AND SAVISION LIVE MAPS BRING YOU FULL TOPOLOGY DISCOVERY

Xian NM and Live Maps got your back!

System Center Operations Manager 2012 offers some kind of topology, but let's be fair, you want more! Xian Network Manager 2012 and Live Maps for OpsMgr 2012 join forces and complement each other perfectly. With Xian NM 2012 discover all relations between network devices and Windows servers and with Live Maps automatically draw those relations in any topology diagram that you create for a quick overview of your network's health.

A topology diagram helps you visualize how your network devices are connected and the communication problems triggered when one of them has an issue. For example, when monitoring Cisco switches you'd probably like to know not only the health status and performance of each individual device but also how a specific problem in a particular component of a switch such as an interface is affecting the rest of the network.

So why wait? Instead take full advantage of both solutions to manage your network thoroughly and prevent unnecessary business downtime. For more information on how to create a topology diagram with Xian NM and Live Maps, click [here](#).

About Jalasoft

[Jalasoft Corporation](#) develops systems management software with a focus on your organization's networks and applications. Our products, such as Xian Network Manager 2012 and Xian Wings, both for Microsoft System Center Operations Manager 2012, help prevent any possible problems, improve the performance and availability of critical business applications and systems. In this way we contribute to increasing the ROI that you realize from your infrastructure investments. Jalasoft is a Gold Certified Partner based in Houston, Texas. We work with Savision Live Maps since 2008!

About Savision

[Savision](#) specializes in products and services that complement Microsoft System Center and maximize its ROI. Our solutions accelerate resolution time of IT problems, provide improved organizational efficiency and reduce business down time, allowing our customers to realize over 20% cost reduction.

Founded in 2006, Savision is headquartered in the Netherlands and is privately held. Savision's founders and executives bring years of enterprise systems and application management experience from large IT service companies. Savision's software is currently used by over 600 enterprises worldwide, including many Fortune 500 companies. Key in their choice were Savision's experience with passion for, and knowledge about, Microsoft System Center.
